Saint Edward High School vs. Brush	1/16/2026	Prepared by: Coach Donelon

Brush enters our contest with an overall record of 7–5. On the offensive end of the floor, they tend to be robotic and do not consistently play with purpose, relying more on sets than flow. They will run some Iverson action, 1–4 high action, and ISO, while also looking to leak out in transition when opportunities present themselves. At times, they will mix in flex action, but overall their execution can become predictable and stagnant.

Defensively, Brush wants to primarily play man-to-man in the half court. They have also shown 2–3 zone, with the middle often left wide open, and they will take possessions off while in zone, creating scoring opportunities if we attack it with pace and purpose. In addition, they have shown some 1–2–2 full-court pressure to try to disrupt rhythm and shorten possessions.

This is a home game and we must take care of business. We cannot allow Brush to get comfortable at any point. We need to set the tone early, play with physicality and focus, and dominate the game for all four quarters. Dictate tempo, impose our will on both ends of the floor, and leave no doubt.

Favorite Sets	Last 2 Minute Sets/ Special Situations
FLEX ACTION	BLOB - BOX
IVERSON CUT	BLOB - BOX TO S+S
1-4 HIGH TO BALL SCREEN	BLOB - BOX FOR INBOUNDER
1-4 HIGH TO ISO	BLOB - 1-4 HIGH TO ELEVATOR
1-4 HIGH TO DOWN SCREEN TO BALL SCREEN	IVERSON
ISO BALL - END OF CLOCK	1-4 HIGH TO BALL SCREEN

Offensive Tendencies	Defensive Tendencies
57.2 POINTS PER GAME	Primarily looking to play man to man in the half court
14.5 OFFENSIVE REBOUNDS PER GAME	Have shown little 2-3 zone - The middle is OPEN
10.1 ASSISTS PER GAME	1-2-2 Full Court Pressure - Trap over half court - MiDDLE is open
16.5 TURNOVERS PER GAME	WING BALL SCREENS - Will look to trap
24% 3PT SHOOTING AS TEAM	Middle Ball Screens - Fight over top
40% FG SHOOTING AS TEAM	BLOB Defense - 2-3 zone - Have played man at times as well
17 FTA PER GAME	

Strengths	Weaknesses
ATHLETIC - ABILITY TO DRIVE TO RIM	3 POINT SHOOTING AS TEAM
TRANSITION OFFENSE	FREE THROW SHOOTING AS TEAM
OFFENSIVE REBOUNDING	ZONE OFFENSE

LAST FIVE GAMES

Date	Opponent	Score	Leading Scorer	Leading Rebounds	Leading Assists
1/13	Hawken	65-59 L			
1/8	Walsh Jesuit	49 - 47 W	#14 - 29 points	#24 - 10 rebs	#3 - 4 assists
1/6	Maple Heights	77 - 55 W	#5/14 - 13 points	#4 - 10 rebs	#3 - 7 assists
1/2	University School	65 -51 W	#14 - 21 points	#14 - 10 rebs	#2/4 - 3 assists
12/27	Sandusky	64 - 47 L	#14 - 17 points	#4/14 - 7 rebs	#3 - 3 assists

Keys To Victory		
	PLAY WITH COMPOSURE	MOVE WITHOUT THE BALL
	TRANSITION DEFENSE	PRESSURE INTO TURNOVERS
	CONTROL THE GLASS	PLAY WITH ENERGY AND SWAG

STARTERS

RIGHTY			**JUNIOR**	4.2 PPG	**HIGH VOLUME 3PT**	
#3 Khalil Dudley	**5'9**			57% FT	RUN HIM OFF LINE - PRESSURE INTO TO	

He is a guard who tends to over-dribble and can be forced into mistakes when pressured. Defensively, we need to be prepared to keep him in front, as sustained ball pressure will lead to turnovers. Offensively, he favors finishing going right at the rim and will often take out-of-control, low-percentage shots when sped up. He is willing to shoot the ball from the perimeter both on the catch-and-shoot and off the dribble, but his mechanics tend to fall away rather than going straight up and down on his outside attempts. While 44% of his field-goal attempts come from three-point range, he is currently shooting just 9% from three on the season. Our focus must be to contest his perimeter shots, run him off the three-point line, and apply consistent pressure to disrupt his rhythm and force turnovers.

RIGHTY			**SOPH**	10.7 PPG	**SCORING MENTALITY**	
#5 Javion Sanderson	**5'11**			59% FT	CONTEST HIS SHOTS - FORCE HIM LEFT	

He is a guard who tends to over-dribble, often trying to create his own offense rather than moving the ball. When he drives right, his primary objective is to finish at the rim; however, he does not finish well through contact and can be bothered by physical defense. When he drives left, he is much more likely to settle for a pull-up jump shot, and he tends to fade or fall back on these attempts rather than rising straight up.

Offensively, he will take low-percentage shots, especially when rushed or contested. From the perimeter, he is primarily a catch-and-shoot threat, but he will also pull up off the dribble in transition. Notably, 46% of his field-goal attempts come from three-point range, though he is shooting just 26% from three on the season. Defensively, we must be disciplined and aggressive on closeouts, consistently contesting his outside shots while also limiting his paint touches. By staying physical, keeping him out of rhythm, and forcing tough, contested looks, we can take advantage of his tendency to over-dribble and settle for inefficient shots.

RIGHTY			**SENIOR**	16 PPG	**DRIVE 1ST**	
#14 Prince Ryleigh-Johnson	**6'2**			58% FT	NO PAINT TOUCHES - KEEP OFF GLASS	

He is a capable driver with the ability to finish going both left and right, though he clearly prefers to finish going right. He has the strength and body control to finish through contact and will look to spin back to the middle when attacking defenders. On the block, he is most effective on the right side, where he looks to attack the baseline. He is extremely active on the offensive glass, consistently creating second-chance opportunities through offensive put-backs, and is averaging 6.8 rebounds per game.

From the perimeter, 16.6% of his field-goal attempts come from three-point range, where he is currently shooting 28%. Defensively, it is critical that we limit his paint touches, stay disciplined in contesting his shots, and make a concerted effort to keep him off the glass to eliminate extra possessions.

RIGHTY	**SENIOR**	5.7 PPG	**DRIVE 1ST - GLASS**	
#4 Jay Gilchrist	**6'2**	48% FT	NO FACE CUTS - KEEP OFF GLASS	

He is a drive-first forward who looks to attack off the dribble as his primary offensive option. On his drives to the rim, he actively avoids contact, often leading to off-balanced and out-of-control shot attempts rather than strong finishes through defenders. He is most effective when he can get downhill cleanly and needs to be at the rim to score, as his perimeter shooting is limited. On the season, he is 0-for-3 from three-point range, reinforcing that he is not a threat from the outside.

Without the ball, he does a good job moving and cutting to the rim, consistently looking for opportunities off face cuts and dribble penetration. In the post, he shows clear tendencies: on the right block he looks to attack baseline, while on the left block he prefers to attack middle. He is active around the basket and is averaging 5.5 rebounds per game, making him a factor on the glass.

Defensively, we must be prepared to keep him off the boards, eliminate face cuts, and wall up at the rim to force tough, contested finishes and prevent him from getting comfortable around the basket.

RIGHTY	**JUNIOR**	9.1 PPG	**GLASS - POST PRESENCE**	
#24 Reginald Smith, Jr.	**6'8**	41% FT	KEEP OFF GLASS - WALL UP	

Physical post presence who is most effective operating on the block. On the left block, he looks to attack middle or square up, while on the right block he will face up or attack baseline. He is comfortable stepping out to shoot short-corner jump shots and will also rim run in transition when given the opportunity. Despite his activity level, he does not consistently square his shoulders to the rim on post finishes, which can impact his efficiency around the basket. He is very active on the glass, averaging 8.9 rebounds per game, and creates second-chance opportunities with his motor. He is not a perimeter threat at this time, shooting 0-for-3 from three on the season.

Game plan: Be physical early, wall up on post touches, and prioritize keeping him off the offensive glass.

GUYS TO FOUL IN LATE GAME SITUATION	GUYS TO AVOID FOULINIG
#2 - #11 - #10	

BENCH

RIGHTY	**JUNIOR**	3 PPG	**DRIVE RIGHT**	
#2 Cody Smith-Green 5'10		53% FT	FORCE LEFT - CONTEST SHOTS	

He is a guard with a clear tendency to over-dribble, often holding the ball longer than necessary and allowing defenders opportunities to apply pressure. When driving to his right, he is primarily looking to get all the way to the rim to finish. If he is forced left, he is more comfortable pulling up for a jump shot rather than continuing his drive to the basket. From a shot-profile standpoint, 35% of his field-goal attempts come from three-point range, and he is shooting a solid 36% from beyond the arc. Defensively, we need to force him left, stay disciplined, and be prepared to contest his outside shots to limit his effectiveness and prevent clean looks from the perimeter.

RIGHTY	**SENIOR**	2.3 PPG	**DRIVE 1ST**	
#11 Cheveyo Dozier 5'10		50% FT	NO PAINT TOUCHES - CONTEST SHOTS	

He is a perimeter-oriented player who is primarily looking to drive left when attacking the rim. While he will put the ball on the floor to get downhill, he relies heavily on perimeter opportunities, with 39% of his field-goal attempts coming from three-point range. Despite the volume, he has struggled with efficiency, currently shooting 18% from three on the season. Defensively, the emphasis must be on limiting his paint touches by keeping him in front and consistently contesting his outside shots, forcing him into tough, low-percentage attempts.

RIGHTY	**SOPH**	5.1 PPG	**POST - SHORT CORNERS - GLASS**	
#10 Braylon Davis 6'5		58% FT	WALL UP - KEEP OFF GLASS	

He is a stretch forward who can impact the game both facing the basket and around the rim. From the right block, he will look to attack baseline, but he has also shown the ability to attack middle when defenders overplay. He is comfortable stepping out to shoot, particularly from the short corners, and will take those jump shots when available. On the season, he is 0-of-1 from three-point range, indicating limited volume from beyond the arc.
In transition, he has a tendency to leak out, creating early offense if not identified quickly. Around the basket, he is more active on the offensive glass, looking for second-chance opportunities despite averaging 1.8 rebounds per game. Defensively, we must locate him early in transition, wall up on his drives, and keep him off the offensive glass to limit his impact.
